Projects

Sentinel AI – Intelligent Resume Screening Platform

[GitHub](#)

- Built an AI-powered resume screening platform using Sentence Transformers, Google Gemini API, and OpenAI API for semantic candidate evaluation.
- Implemented secure user authentication and report management using Firebase Authentication and Firebase services.
- Generated recruiter-friendly PDF/Excel reports and hiring recommendations through an interactive dashboard.

BlackBoxCV – Resume Screening Analyzer

[GitHub](#)

- Developed an NLP-based resume analyzer using semantic matching instead of traditional keyword filtering.
- Simulated ATS-style candidate evaluation and skill extraction from resume content.
- Designed an interactive Streamlit interface for candidate assessment.

Real-Time Low Voltage Line Fault Detection System

[GitHub](#)

- Built a real-time AC line fault detection system using NodeMCU and embedded programming.
- Detected line breakages and transmitted alerts within seconds for rapid fault identification.
- Developed a live monitoring dashboard for visualization and system status tracking.

Achievements

- Solved 120+ Data Structures and Algorithms problems using Java.
- Strong foundation in Arrays, Binary Search, Hashing, Strings, Linked Lists and Trees.
- Built and deployed multiple AI-powered software projects using NLP and Machine Learning concepts.

Extracurricular

- Participated in debate, extempore and public speaking competitions at school and district level.
